

The text calls road travel the most dangerous forms of transport, accounting for a significant proportion of global deaths. Different methods to reduce accidents are described: traffic laws, licensing, speed cameras and some others.

The author emphasizes that modern technology has made cars much safer thanks to features like seat belts, traction control, airbags, advanced brakes, and safer materials. However, the author shows a different point of view: these technologies may actually lead to more aggressive driving, thereby increasing the risk of accidents.

The author concludes that road safety is primarily a psychological issue and suggest that making drivers feel less secure could lead to safer behav
